Pafra Adhesives Statement on Animal Products and Testing on Animals

There has been growing concern about the use of animals in the testing of consumer products.

In the past Pafra Adhesives Ltd has been asked about the position of particular adhesives in respect of use of animals for testing.

We supply a small number of specialist products to the medical industry which requires that the raw materials have been tested to ISO10993, part of which includes tests for skin sensitization, irritation and in vitro cytotoxicity. This testing is carried out by the manufacturers of the raw materials and not Pafra adhesives.

We can assure our customers that:

1. Pafra Adhesive products do not use or contain animal derivatives;
2. NO Pafra Adhesive products have ever been tested by us (or by agencies acting on our behalf) on animals and
3. To the best of our knowledge no bought-in Components or Raw materials used in Pafra Adhesives have been tested by our suppliers (or by agencies acting on our or their behalf) on animals, with the exception of the legal requirements surrounding adhesives for medical applications as explained above.

On behalf of Pafra Adhesives Limited

A handwritten signature in blue ink, appearing to read "AS", followed by a horizontal line extending to the right.
